Calculating an Unweighted Cumulative GPA

Unweighted Cumulative GPA is the average of all final course grades received in high school level courses based on a 4.0 scale (see table below). Unweighted GPA is calculated by multiplying the final course grade with the credit awarded divided by the total credits. (see example) [GPA (unwdt) = Quality Points / Total Credits]

Example:

Grade	Points Awarded
A (90%-100%)	4
B (80%-89%)	3
C (70%-79%)	2
D (60%-69%)	1
F (0%-59%)	0
